JAN 2023 – Present

Different Projects – Talks and Instructoring

Remotly

- Started Working as a Freelancer as Backend developer since Jan 2023 at many platforms and with my network connection.
- Give talks about Backend and other fields at my faculty, teaching Fundamentals of database, advanced database, and distributed database for my colleagues.

Projects

Assiut University Hospital, Assiut – AI Researcher & Backend Teach Lead – Graduation Project

- Role one: Part of a team that is seeking to develop a Deep Learning model that can classify and segment a tumor in diseases like brain tumor segmentation.
- Role two: Responsible for the Backend, frontend, and the flutter teams, receiving these works rating them and start giving the editions and creating the backend work with Node.js & Express.js, MongoDB, searching for new ways and tools for developing the system.
- A Project of Brain Tumor Classification and segmentation, then creating the website and the flutter app.

Golden Fitness – Laravel 10

- Developed a comprehensive Gym Management System using Laravel, featuring advanced functionalities such as real-time notifications, live chat, and a reward system to enhance user engagement.
- Designed a compact dashboard that consolidates key data and provides an intuitive overview on the homepage for easy navigation and decision-making.

- Integrated a seamless online payment system using Paymob, ensuring secure and efficient transactions for users.
- Implemented CRUD operations for managing gym members, trainers, and subscriptions, with a focus on user-friendly interfaces.

Natours | *Node.js & Express & MongoDB*

- Creating APIs for the system with other features like: User Authentication and Authorization, Tour Management, User Management, Advanced Features.

E-commerce | *Laravel & Php*

- Built using PHP and Laravel, featuring a user-friendly website and an admin dashboard.
- Includes Home, Contact, About, Shop, Single Shop, and New Arrivals, with dashboard access restricted to authorized users
- Three roles—Admin, Moderator, and Customer. Only Admins and Moderators can access the dashboard.
- Supports CRUD operations for categories, subcategories, products, and users, including force delete options.

TrendBy – E-commerce subject at the faculty

- Working as a backend developer, sending API's and fitting with flutter apps.

CRUD Student Management System – PHP

- Developed a student management system with CRUD operations (Create, Read, Update, Delete) using PHP.
- Focused on providing a simple and efficient interface for managing student data.

Task Management System – Laravel 10

- Developed a task management system with Laravel/UI for authentication and multi-language support, featuring task browsing on the homepage and easy navigation with a sleek navbar.
- Provided full admin control for tasks, including create, edit, delete, and restore functions, with a focus on security, efficiency, and user-friendliness.

Product Management System – HTML, CSS, JavaScript

- Developed a Product Management System using HTML, CSS, and JavaScript, featuring CRUD operations for managing products.
- The system includes product creation, updating, and deletion, providing a user-friendly interface for inventory management.

Technical Skills

Languages: C++, C, Java, GoLang, JavaScript, TypeScript, R, Python, C, PHP, SQL, HTML/CSS, Dart

Technologies: Node.js, Laravel, Express.js, React.js, WebScrapping, web crawling, TensorFlow, jQuery, Bootstrap, ASP.NET

Concepts: Compiler, Operating System, Virtual Memory, Cache Memory, Encryption, Decryption, API, Database Normalization, Agile Methodology, Cloud Computing

Soft Skills

Team Leader , Effective Communication , Problem-Solving , Adaptability , Decision-Making , Empathy, Empathy , Conflict Resolution
